

Digital Photography Course

Come and join us for a Digital Photography Course
starting
Tuesday February 28th
from 9.50 - 12.00 for 8 weeks.

Course Outline

- This photography course covers the basics of exposure, composition, aperture selection and shutter speeds. You'll find out how these elements affect your final image. You will also learn how the basic buttons and dials on most cameras function and how to use them. You will explore composition techniques, such as "framing" and the "rule of thirds" and how these can be applied to any camera from an advanced SLR to a simple, but effective, "point and shoot" camera.
- The course also features a number of field trips which will demonstrate how a photographer thinks, through a variety of real-life photographic situations. You will see demonstrations that showcase elements of urban and rural landscapes, wildlife, people, special occasions and holidays.
- This course will teach you how to appreciate the fundamentals of photography but also how to use these acquired skills to put together photographic stories that go beyond the individual still image.

Cost: €50.00 for 8 weeks

Venue: Stokes Building DCU, Room S208 (located on DCU campus facing the Collins Avenue entrance)
